Bench Extension Board

Part # BEB

Dimensions: 600mm x 450mm

The Dalmau Bench Extension Board (BEB) is a way to extend the capability of The Dalmau Workbench for sitting or standing work and allows the integration of theory and practice in the one room.

The BEB can be quickly attached and detached at any point along the four edges of the bench and easily taken from the Dalmau Workbench by the students as required. The boards are machined on precision CNC equipment and present an extremely flat work surface.

Being able to design, prototype, evaluate and adjust is potentially as close as moving back and forth from the BEB to the work pieces at arm's length. The BEB allows for a truly multi-purpose design, development, fabrication and evaluation workshop/work station.
