

PORTABLE & SAFE WELDING BENCH

Flame Cutting

This bench is the answer for safer flame cutting using either oxy-acetylene or plasma. Sparks and hot off-cuts fall through the grate and are directed by the chute into a quench tank containing water.

Flame Welding

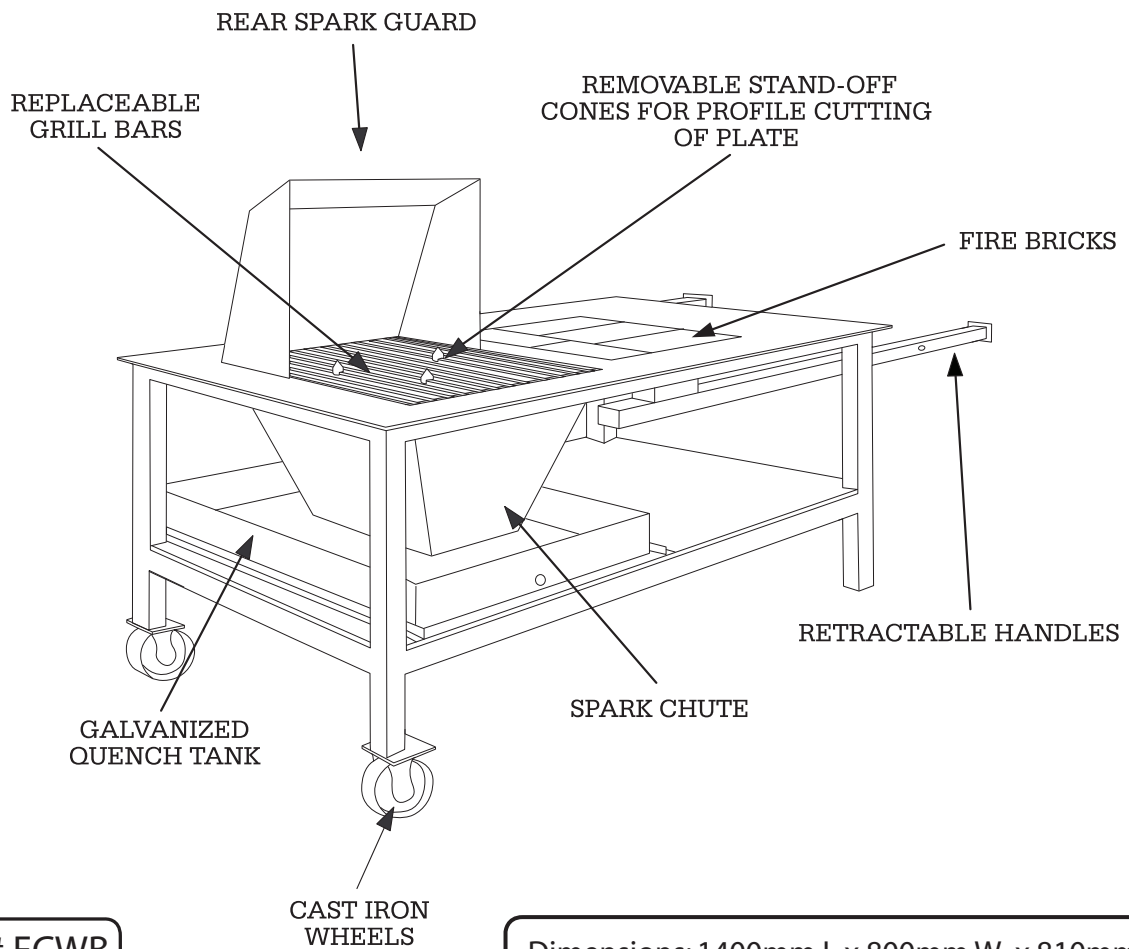

Whether it is oxy welding, brazing, silver soldering or TIG welding, the refractory fire brick bed minimizes heat transfer to the steel bench.

General

A laser cut hole pattern on the bench top allows a 100mm engineering vice or chain pipe vice to be mounted if needed.

The grill bars can be reversed and then replaced when needed.

The retractable handles and rear jockey wheel allow the bench to be easily moved.

Part # FCWB

Dimensions: 1400mm L x 800mm W x 810mm H
